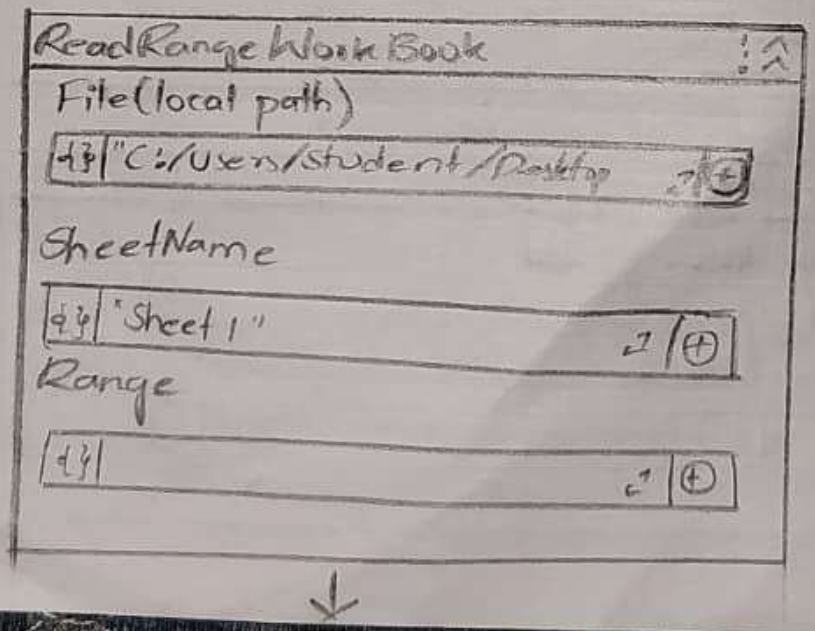
Experiment-10

Aim: Perform email automation.

Email Automation:

* Open 'ReadRangeWorkBook" activity give the file address of excel sheet (where to and from email addresses given).
* Now, take "Output data table as text" activity. and give 'dt', then take message box activity, give 'dt1'.
* Now give "For EachRow in DataTable" and take item name as currentRow as the variable.
* Now in body take 'getRowItem' activity and give there column to name and set value as the name.
* Then take 'Assign" activity and give another output variable "emailbody" and set value to "hi".
* Choose 'sendEmail' activity and save as draft to False and give To: email and run all of the cells.



Output Data Table as Text
